

I'm not robot!

The Grand Master Kai looms on my crew via a hologram like a raged Greek cyborgo. It is our bimonthly relationship and is not happy. The desire of our inquisitor aboard that he procures his knowledge of the plague Nurgle has inadvertently accelerated his diffusion and wants to know who is responsible. Do I deal with inquisitor Vakir and piss his brother Ectar, venerated captain of the Space Marine Gray Knights chapter or does he throw the inquisitor brazen under the bus? Whatever I do, someone will be unhappy and this has chain effects. I go for the third option: give the Grand Master that the mission is going exactly as expected. He buys it and, since we are going so well in our campaign (which we are not in reality), he deviates our requests and arsenal access to some other chapter that needs it. My reluctance to attribute the fault meant that I remained alongside my crew companions, but I also assured that the next two months of our campaign will be particularly exhausting. (Image credit: Frontier Foundry) And here I was thinking that the Daemon Hunters would have made a simple game of tactics in turn, content to change those robust XCOM bases for the marketable myth of Warhammer 40,000. Yes, you will spend most of your time on the battlefield, jumping between the planets in four cracksquad to fight a cosmic smallpox propagated by the god of the nurgle plague. But while the Daemonhunters performs its fight very well, it also succeeds in all things between the missions. There is Schmozing, politicism and pacification, space battles and events based on the text, research and repair of ships. Choose the rhythm in which you progress through the campaign, balance us the conflicting interests of your frustrated and fractured crew. You are an active character in a spatial work well It is well written and your decisions as a commander of the good balleumpm edict are as important as your companies in battle. Each crew companion on the upper bridges of Di The Baleful Edict — the Royal Marines are supposedly locked up in their barracks — has their priorities within the greatest conflict. Brother Ectar is a veteran of Grey Knight who is fiercely loyal to his fellow marines. Vakir, meanwhile, is an arrogant but dedicated inquisitor, who believes that the Marines are exorbitant tools in the mission of understanding and stopping Bloom. Then there is Lucete, the fascinating robotic Tech-Priest that will often interrupt the other two who collide while preaching the importance of non-emotion (although you can also crush his wires by making decisions that compromise the safety of the ship that is responsible for restoring to his former glory). (Image festival: Frontier Foundry) There will be times when Ectar will insist on observing the traditions of the Grey Knights, such as organized fights between the Marines or even dedicated days of meditation. Crossing these rituals will increase morale and grant XP increases for your Marines, but frustrate the individual Inquisitor, causing a penalty for the search speed. You could not have chosen a group of less compatible people, but even if they are too involved in their personal missions to see the bigger picture, they are well characterized by solid writing, abundant dialogue options, and surprisingly expressive cutscenes and animation. And hanging on board politics are your regular reports to the Grand Master, with whom you will need to step on carefully to ensure updates to recruits and equipment. It is practically the basic system of the Pandemic board game—that any fan attests is masterful to generate tension. The biggest threat of overarching is Bloom, Nurgle-driven disease that breaks at regular intervals on random star systems while traveling with each other. (Credit image: Frontier Foundry) The environments, to begin with, are a pleasure of destroyable potential. Beyond the cache of compulsory explosive ammunition and fireplaces, there are pillars to be overturned on the enemies and bridges to destroy the single moves capable of oscillating a scaramuccia. Particularly impressive is the fact that most of the walls can be sautéed in the air, which adds a layer of birds even to the most planned moves. At some point, I pushed a column on a line of four enemies, one of which was sent to fly into a cash case. While I was dissipating the air in ecstasy and the cloud of smoke, I saw that I had also detonated a part of the wall, causing a nema patrol from the door to come to stream and putting a brusque end to my celebration. XCOM, from the dart between partial and complete coverage, to fundamental points of action and skills such as Overwatch. But beyond there, he cuts out his path. There is almost no RNG, for a start, and what is the point of relying on the roof when that coverage could be swept away in the next round? In the same way, the rich interaction of the classes and skills of the gray knights meant that in a short time I would almost forget that overwatch - that fidable distinctive sign of the genre - even existed. In a double branding elusive ninja with self-employed points of action. Using the teleportation strike, I could seriously damage several enemies in a single AP, give that AP a probability of 80% to automatically supply, then continue to tear the enemies in depth behind their lines. In the absence of Terminator Armor.
